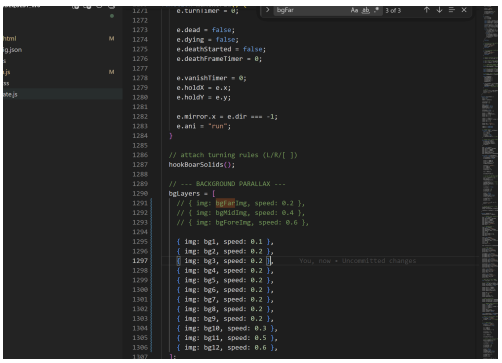
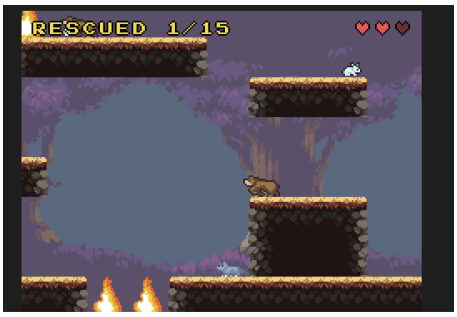
Process & Decision Documentation

Side Quest #6 Decisions





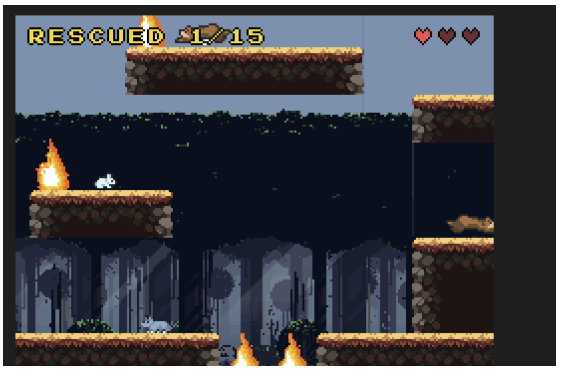
```
for (const layer of bgLayers) {
  const img = layer.img;
  const scale = VIEWH / img.height;
  const w = img.width * scale;

  let x = (-camera.x * layer.speed) % w;        You, now • Unco

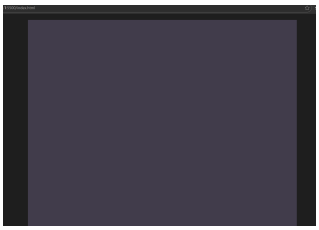
  for (let i = -1; i <= ceil(VIEWW / w) + 1; i++) {
    image(img, x + i * w, 0, w, VIEWH);
  }
}

camera.on();
```

(GenAI help)

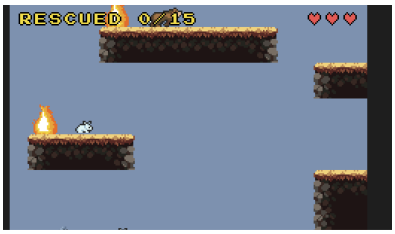


```javascript
image(img, x + i * w, -VIEWH * 0.35, w, VIEWH * 1.35);
```



(Gave me a blank background?????)

- Later realized that the forest of this background png was meant to be in the middle, as the sky and ground are meant to be there
- I had in mind that the forest was supposed to fill up the whole thing -> Error on my part for giving instructions when I was initially confused by the sprite design



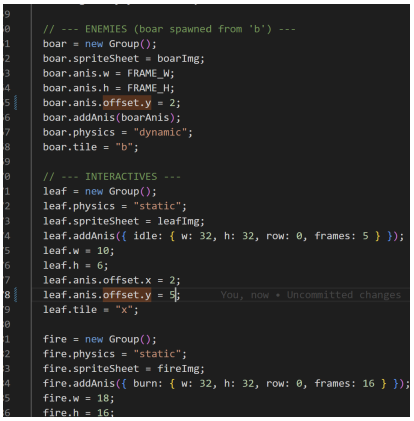
```javascript
for (const layer of bgLayers) {
  const img = layer.img;
  const h = VIEWH * layer.scaleY;

  let x = Math.round((-camera.x * layer.speed) % VIEWW);
  if (x > 0) x -= VIEWW;

  for (let tx = x; tx < VIEWW + VIEWW; tx += VIEWW) {
    image(img, tx, 0, VIEWW, h);
  }
}
```

Tried again with the code, but it was still not what I wanted so I ignore the code and played around with the initial image(img, tx, 0, VIEWW, VIEWH * 1.3); it gave

Added the new tiles set, but the art is “thinner” compare to the base example ones = need to fix offset keys

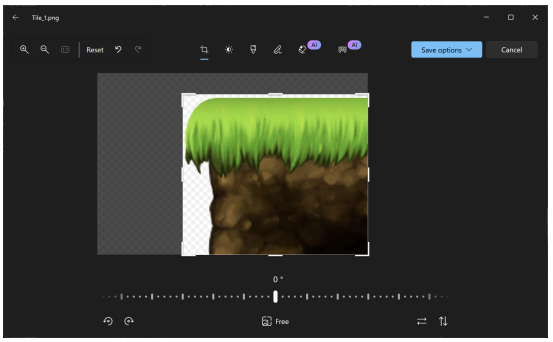


```
// --- ENEMIES (boar spawned from 'b') ---
boar = new Group();
boar.spriteSheet = boarImg;
boar.anis.w = FRAME_W;
boar.anis.h = FRAME_H;
boar.anis.offset.y = 2;
boar.addAnis(boarAnis);
boar.physics = "dynamic";
boar.tile = "b";

// --- INTERACTIVES ---
leaf = new Group();
leaf.physics = "static";
leaf.spriteSheet = leafImg;
leaf.addAnis({ idle: { w: 32, h: 32, row: 0, frames: 5 } });
leaf.w = 10;
leaf.h = 6;
leaf.anis.offset.x = 2;
leaf.anis.offset.y = 5;        You, now • Uncommitted changes
leaf.tile = "x";

fire = new Group();
fire.physics = "static";
fire.spriteSheet = fireImg;
fire.addAnis({ burn: { w: 32, h: 32, row: 0, frames: 16 } });
fire.w = 18;
fire.h = 16;
```

(Manually go in to make them whole numbers)



I was having a hard time with the tile blocks because in the original png it had the transparent frames and it acted as a barrier in my playthrough. So I manually tightened by cropping.

Had GenAI generate the level, but some issue still occurred so I had to manually fix it.

Issue with ChatGPT: I ran into issue with implementing my sound effects and it was causing many frustration. I decided to run my entire code in Claude and it was able to detect the issue that Chat wasn’t able to. I think its like getting a second opinion but with AI?

GenAI Documentation
Date Used: March 12 - 13, 2026

Tool Disclosure: ChatGPT 5.2 & Claude Sonnet 4.6

Purpose of Use: Using GenAI to help aid in coding and debugging for sidequest 6

Summary of Interaction: I used ChatGPT to generate with coding task (generate platform, implement areas of codes) and Claude was used to help debug sound issues that ChatGPT could not figure it out.

Human Decision Point(s): Took charge of defining specific variables of the codes and what aspect of Chat decisions and interpretation of the theme. ChatGPT gave me options and suggestion and I choose to ignore some because it either did not understand my point or it did not work.

Integrity & Verification Note: I ran the code in VS-Code and double-checked on Live Server if the output matches what the code states. I also took screenshots of my progress and the result of what I got from some of the coding.

Scope of GenAI Use: GenAI is used primarily as a coding tool for this project, with human input (debugging, filler code were written by me).

Limitations or Misfires:

Summary of Process (Human + Tool):

- Input file of codes + prompt (issue to fix, generate code, etc)
- I took the code and ran it in VSCode
- If it did not work I either reject the code or fix minor bugs (if I understand how to)
- Ran more prompts
- Ran entire coding project though Claude to find issue

Verification & Judgement

- For each ideas, I individually tested them in VSCode to validate if they would work with the current code without much-needed edits
